

## Mortgage Fraud

Mortgage fraud has grown by 1000% since 2000 and regulators and secondary market partners now require originators to validate more of the borrower and property data using independent third-party sources to help combat this trend.

## Mortgage Fraud Report (MFR)

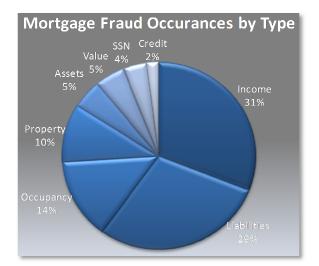

The validation services enable lenders to quickly identify discrepancies, track issues, reduce the risk of fraud and comply with their secondary market requirements. The validation services search billions of public records and return concise, real-time reports to streamline the verification process.

Instantly access billions of public records to detect discrepancies in:

- $\triangleright$ Borrower ID
- Subject property

 $\triangleright$ Liens Employment

# Highlights

#### **Detect fraud sooner**

- ✓ Instantly verify key application data
- ✓ Detect discrepancies and potential risk factors
- ✓ Score ID theft risk
- Comply with secondary market requirements
- ✓ US Patriot Act Section 326 compliant

### Reduce validation time & costs

- ✓ Easy ordering
- ✓ Streamline validation
- ✓ Extensive reporting and tracking
- ✓ Concise validation reports
- ✓ Actionable risk score

## **Detect Fraud Sooner and Protect Your Bottom Line**

The MFR is available from within the SharperLending platform. The **Fraud** button orders the MFR, which is a 30 second product that instantly accesses and validates data across billions of public records from the leading national databases. <u>Order all mortgage products from the same place and eliminate data re-entry</u>.

END OF RE	PORT			

The SSN has been checked against SSA records to insure it is a valid number and was issued after the DOB. The SSN and name have been checked against the SSA Death Master File for a match with a deceased person.

The ID score ranges from 1 to 99, where 99 represents the riskiest 1% of address discrepancies. As the score increases so does the risk of identity fraud. Analysis has shown ID scores of 95 or above carry a significantly higher fraud risk containing 51% of client fraud and that scores of 90 and above contain 65% of client fraud. The drivers that affected the score result are rank-ordered and displayed below the score. The client's "best practices" for using the score is primarily driven by factors like their fraud rate, and their loss exposure.

The Household Income Estimate is for the residents at the input address. The estimate is based on a number of sources some containing self-reported income and asset data and neighbourhood economic attributes. When household level information is not available the estimate returned is for a "zip plus 4" grouping (approximately 5-10 households).

Disclaimer: The information in this report is provided to supplement the authorized recipients other processes to identify potential misrepresentations. The data is gathered from multiple public sources and based on the input data. The accuracy of the data can not be guaranteed.
